

# ABEGate

**Eliminate all unsafe USB sticks and passwords**  
Secured and Controlled file transfers across Firewalls and Networks  
using encrypted and secure connections

## **ABEGate provides secure and encrypted file and folder transfer from endpoints across networks and firewalls**

### **Security**

Encrypted and Secure connection between client and host provides a secure channel to transfer files between networks and across firewalls. Private and Public certificates allow the connection to happen securely without the need of unsafe passwords.

### **Customizable**

Controls what file extensions and filename keywords are allowed and even the maximum file size to be transferred to avoid network overload. User can choose over what port the communication will happen providing an extra level of security.

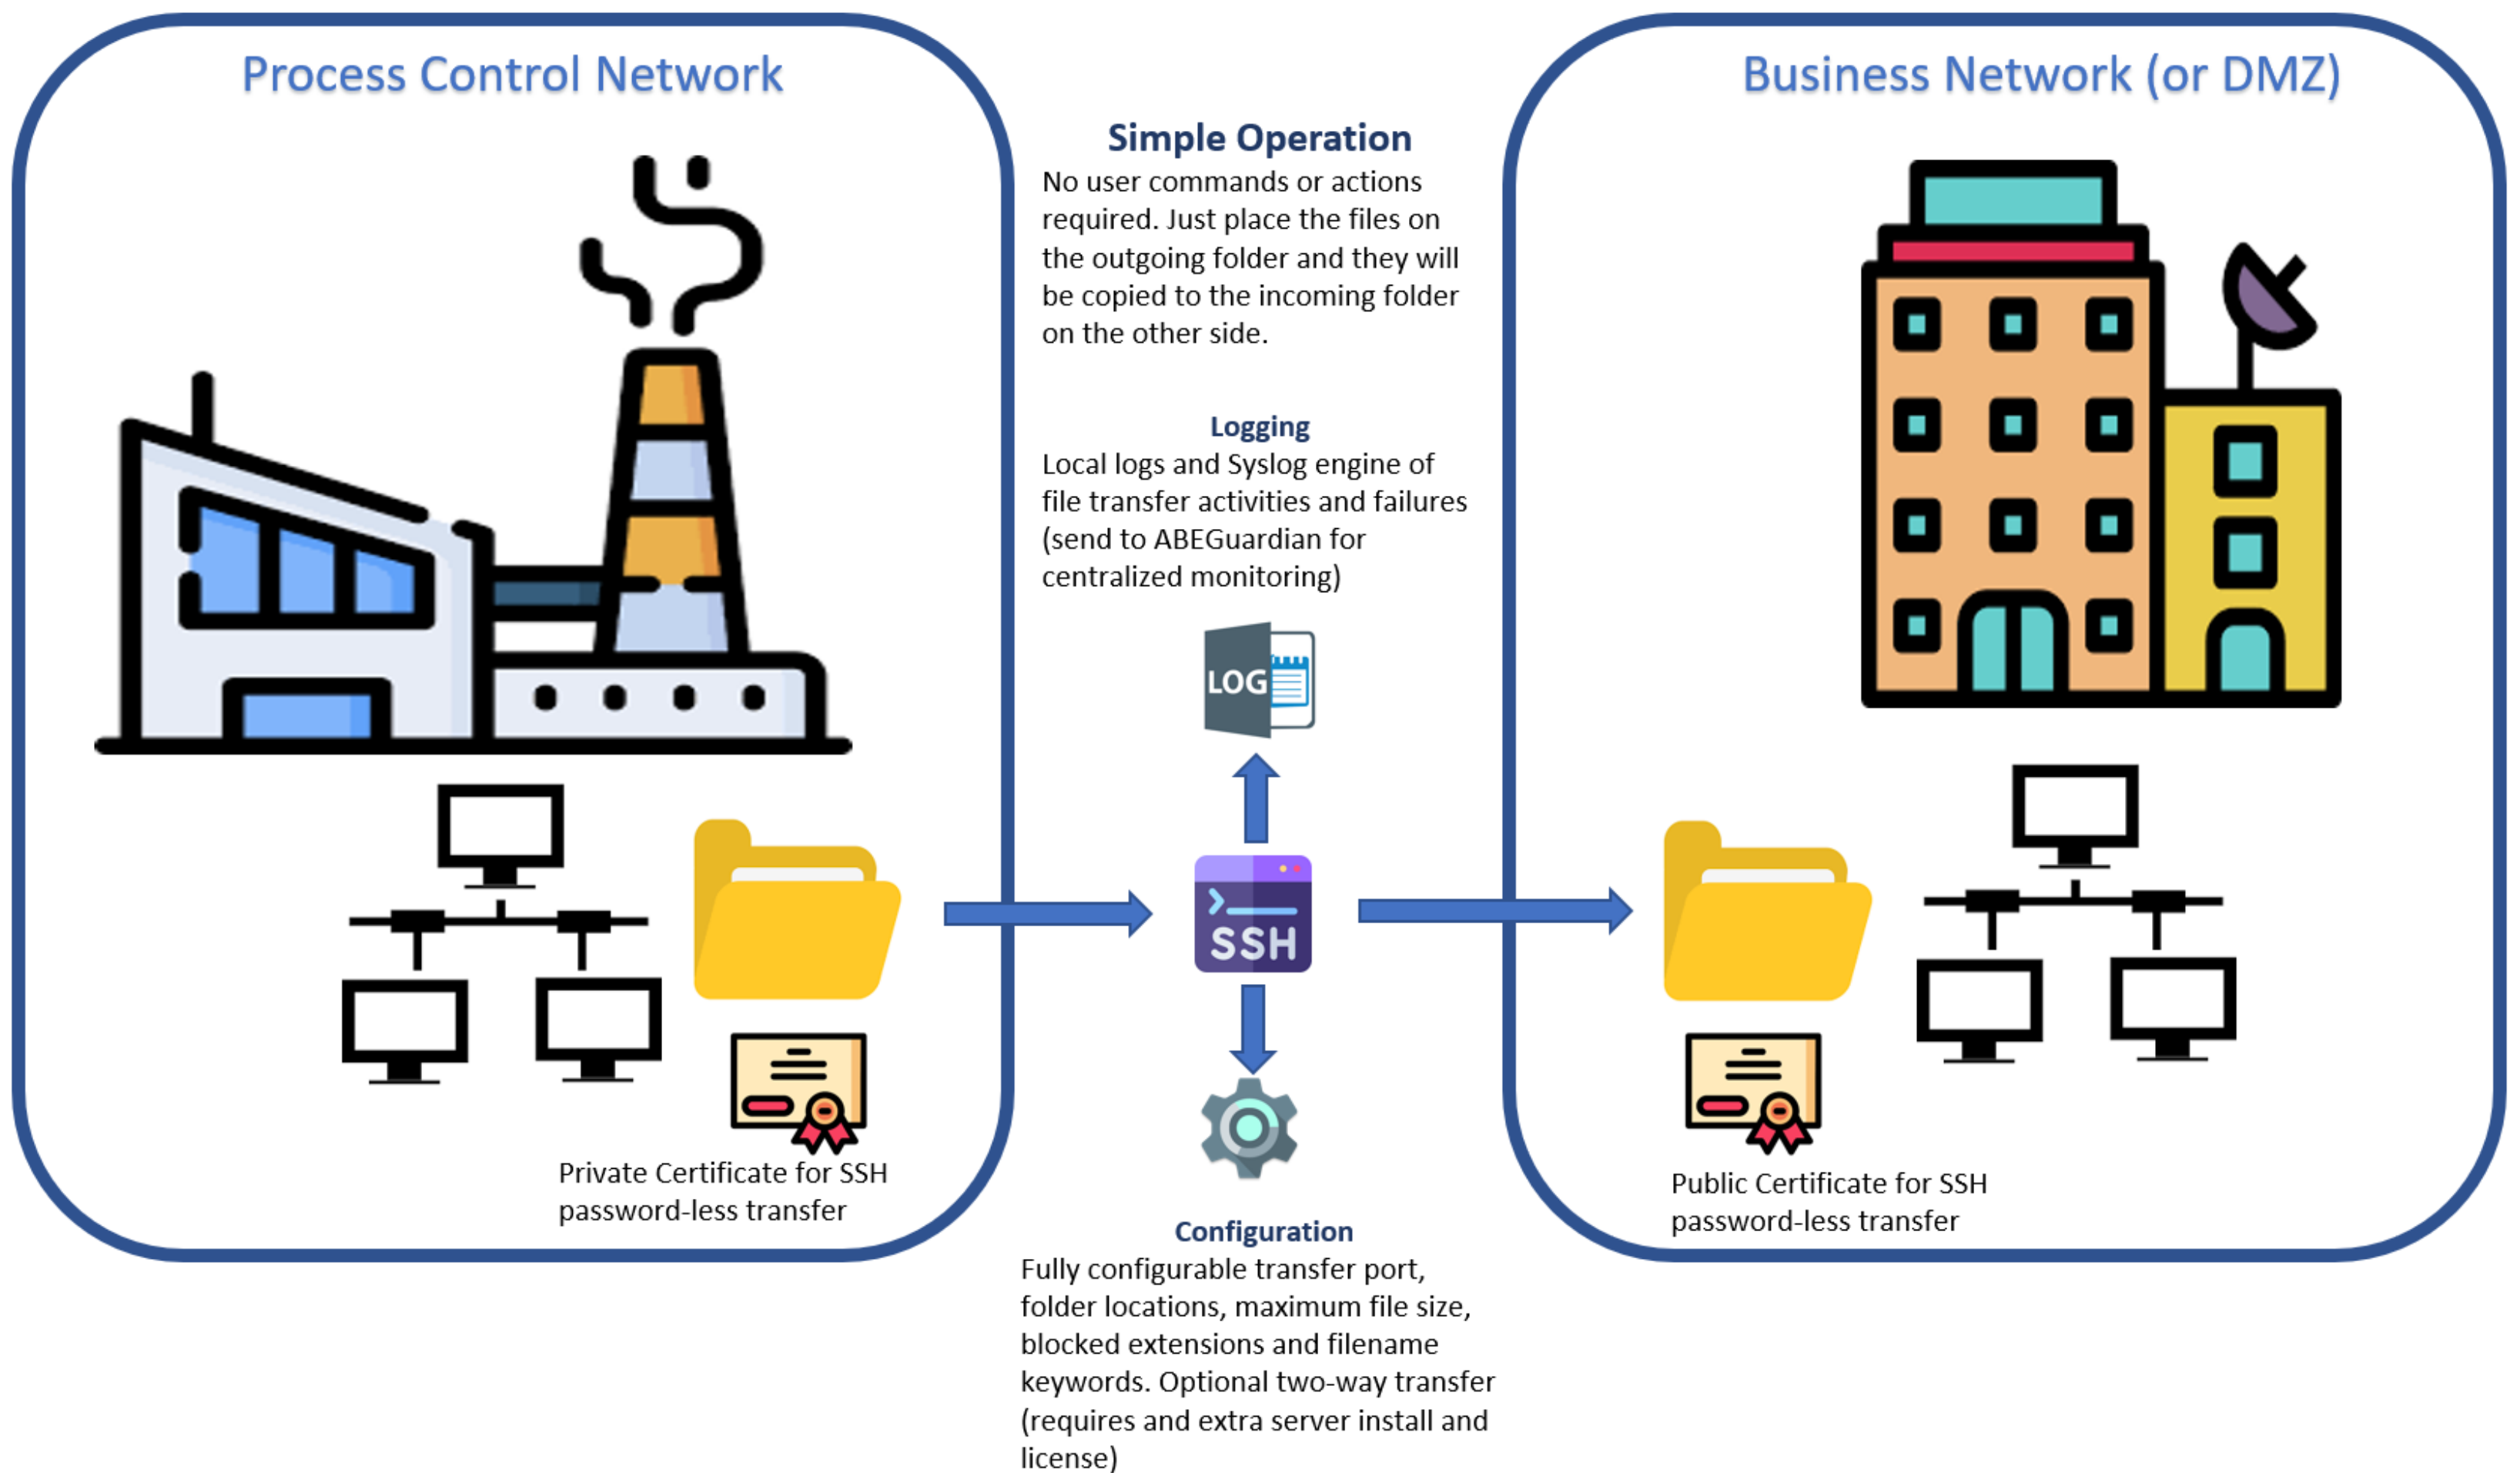

### **Tracking and Reporting**

Track and reports all transfers and events (blocked files, failed transfers, etc) are logged and can be made available through Syslog events and connected to ABEGuardian or any other Syslog Server application for tracking , reporting and alert.

ABEGate allow users to increase their DCS/PLC networks security by removing the need of USB drives and shared folder between networks and adding an extra level of monitoring of what is being transferred in (optional) and out of the process control network.

# Architecture

ABEGate uses SSH technology to provide end to end transfer security and its services can monitor and log all file transferings across the networks.

## Extra features

- **Multiple PCN Networks allowed.**
- **2-way transfers allowed (optional).** With the installation of a separate ABEGate and it can be enabled manually during times when transfers are needed.
- **Supports multi folder structures.**

# ABEGate

**Get rid of unsafe USB sticks and password**  
Secured and Controlled file transfers across Firewalls and Networks  
using encrypted and secure connection
